

T•A•P

Sealed Crawlspace System

The T•A•P Sealed Crawlspace System takes advantage of emerging building science practices and couples them with the unique T•A•P EPA labeled pest control insulation. Traditional, vented crawlspaces allow warm, moist air around cooling ducts and sub floor structures, causing condensation, potentially leading to mold and mildew growth. The Department of Energy recommends that a sealed, insulated crawlspace is the most effective system in managing the energy consumption of a structure and can help control moisture related problems.

The System

Utilizing the T•A•P sealed crawlspace system is the easiest way to offer this unique service to your clients, and open even more profit opportunities to your company. And with our monitoring system, recurring revenue can be gained as well! The T•A•P crawlspace package is the perfect add-on to the starter 450PCO kit, and allows the PMP to blow T•A•P pest control insulation directly onto crawlspace walls. The 450PCO with the Crawlspace upgrade can also be used for new home installation with the purchase of only a few additional components; however larger equipment, larger trucks and trailers are recommended for ongoing new home insulation.

Applying T•A•P

It is not unusual for a new contractor to pay for the equipment purchased within the first 6 jobs!

T•A•P Sealed Crawlspace System

(As an option of the 450PCO system)

- High-Pressure Pump Set complete w/ gauges & fittings
- Flexible High Pressure Hose (150')
- Wall Spray Nozzle w/ Jets

Ongoing Support

- Membership access @ www.TAPinsulation.com
- Training Manuals (electronic or printed upon purchase)
- Phone Support from PCIS
- Updated supply catalogs
- Warranty and product information for homeowners
- Quote sheets and sales support literature

On-site training available (just pay the trainer's travel costs).
Delivery time for the crawlspace package is about two weeks from date of order.
